

## ROTATIONAL MOULDING

### **MR 1003N**

Semi-permanent, non-transferring release agent for rotational moulding of linear and reticulated PE, PP, Nylon. Allows multiple releases with only one application.

### **MR 1050, MR 1200**

Semi-permanent, non-transferring release agents for rotomoulding of linear and reticulated PE, PP, Nylon. Allow multiple releases with only one application.

### **MR 10 W AC and RTM SS-W**

Water based release agents for rotational moulding of PE, PP, Nylon.

### **RTM 2016 #28**

Water based release agents for rotational moulding of PE, PP, Nylon.

### **LUBROLENE E6**

Aerosol releasent/lubricant to be applied on flanges and other difficult points where parts tend to stick to the mould and break. Excellent as sole releasent for PE and PP tanks, motorbike tanks, New Jersey, etc..

### **FINCOLUBE**

Low cost aerosol releasent for flanges and other difficult points.

### **GRIP 31**

Flow improver. Allows to obtain parts with better profile, appearance and improved functionality.

### **FINCLENE 24**

Mould cleaner. It removes polymer build ups and color residues.
